Recommendation

In each city ratio of restaurants and consumers are almost same.

Restaurants offered cuisine is different from consumers cuisine (not follow Demand and supply rule)

Drinker ratio 36% and the full Bar ratio is 6.9% so the increasing of full Bar ration increase in service rating.

Most of the consumer age is 20% to 25 % and most of them are students and their budget are medium and ratio is 51% and the restaurants medium price ratio is 46%.

Food rating is more than service rating so that restaurants need more focus on sevice to increase over all rating.
